## What to know as you start taking CABOMETRYX (cabozantinib)

Your doctor has chosen CABOMETRYX for you or someone you are caring for. This handbook will help you as you start treatment. It provides information about CABOMETRYX, how to take it, and what to do if you have side effects.

## Information and support for you

About CABOMETRYX® .....	4
How CABOMETRYX is thought to work.....	6-7
Taking your CABOMETRYX.....	8-10
Managing and learning about certain side effects.....	11-13
Important Safety Information.....	14-19
Learning more about select side effects.....	20-21
Partnering with your healthcare team.....	22-23
Taking an active role in your treatment.....	24-25
Support and resources.....	26-29

The information in this handbook is not a substitute for advice from your healthcare team.

Visit [CABOMETRYX.com](https://www.cabometryx.com) for more information.

Please see Important Safety Information on pages 14-19 and [tap here](#) for the Patient Information in the full Prescribing Information.

## Learn more about CABOMETYX<sup>®</sup> (cabozantinib)

CABOMETYX is a prescription medicine called a tyrosine kinase inhibitor (TKI). It is a tablet.

### It is used to treat:

- People with kidney cancer (renal cell carcinoma). CABOMETYX may be used:
  - Alone to treat people with renal cell carcinoma (RCC) that has spread (advanced RCC)
  - In combination with OPDIVO (nivolumab) when your cancer has spread (advanced RCC), and you have not already had treatment for your advanced RCC
- People with liver cancer (hepatocellular carcinoma) who have been previously treated with the medicine sorafenib.
- Adults and children 12 years of age and older who have a type of thyroid cancer called differentiated thyroid cancer (DTC) that has spread (locally advanced or metastatic), **and**,
  - has progressed after treatment with a VEGFR-targeted treatment, **and**
  - your DTC can no longer be treated with radioactive iodine, or you are not able to receive radioactive iodine treatment.

It is not known if CABOMETYX is safe and effective in children younger than 12 years of age.

### SELECT IMPORTANT SAFETY INFORMATION

**What are the possible side effects of CABOMETYX? CABOMETYX may cause serious side effects, including: Bleeding (hemorrhage).** CABOMETYX can cause severe bleeding that may lead to death. Tell your healthcare provider right away if you get any signs of bleeding during treatment with CABOMETYX, including:

- Coughing up blood or blood clots
- Vomiting blood or if your vomit looks like coffee grounds
- Red or black (looks like tar) stools
- Menstrual bleeding that is heavier than normal
- Any unusual or heavy bleeding

## What happens in cancer

Your body's cells include proteins that send signals telling cells to grow and divide.

In cancer, these signals cause blood vessels to grow and feed the tumor (angiogenesis).

The immune cells that usually help find and kill cancer cells are stopped by immunosuppressive cells.

### Key

- protein
- immune cells
- immunosuppressive cells
- CABOMETYX
- OPDIVO

Please see Important Safety Information on pages 14-19 and [tap here](#) for the Patient Information in the full Prescribing Information.

**CABOMETYX<sup>®</sup>**  
(cabozantinib) tablets

## How CABOMETYX<sup>®</sup> (cabozantinib) may work alone

CABOMETYX is believed to reduce or slow the proteins' signals that tell cancer cells to grow and divide.

CABOMETYX may limit the growth of blood vessels that feed the tumor. It also may help the body kill cancer cells.

With CABOMETYX, tumors may stop growing or even shrink.

Treatment with CABOMETYX alone or in combination with OPDIVO may impact both cancer and normal cells—which may result in certain side effects. For more information about CABOMETYX side effects, please see Important Safety Information throughout this brochure, on pages 14-19,

## How CABOMETYX may work in combination with OPDIVO<sup>®</sup> (nivolumab) in advanced kidney cancer

Sometimes CABOMETYX is given with an immunotherapy medicine called OPDIVO.

OPDIVO helps immune cells identify and attack cancer cells that are hiding.

CABOMETYX + OPDIVO can improve your body's ability to fight advanced kidney cancer.

and [tap here](#) for the Patient Information in the full Prescribing Information. For more information on OPDIVO, including potential side effects, please visit [OPDIVO.com](http://OPDIVO.com).

## Taking your CABOMETYX® (cabozantinib)

CABOMETYX is a once-daily tablet.  
Take as prescribed by your doctor.

### DO

- Swallow your CABOMETYX tablets whole
- Take your CABOMETYX dose at the same time everyday, or as prescribed
- Take CABOMETYX at least 1 hour before or at least 2 hours after eating

### DO NOT

- Take CABOMETYX with food
- Crush the tablet

- **Drink grapefruit juice, eat grapefruit, or take supplements that contain grapefruit or St. John's wort** during treatment with CABOMETYX

**Call your doctor or nurse right away** if you take too much CABOMETYX.

Please see Important Safety Information on pages 14-19 and [tap here](#) for the Patient Information in the full Prescribing Information.

## What if you forget to take your CABOMETYX?

If your next dose is in:

### LESS THAN 12 HOURS

- Do not try to make up the missed dose
- Take the next dose when you usually take it

### 12 HOURS OR MORE

- Talk to your doctor or nurse if you miss a dose

This is not intended as medical advice. Talk to your doctor if you have any questions.

To learn more about dosing, please visit [CABOMETYX.com](http://CABOMETYX.com).

## Taking your CABOMETYX® (cabozantinib)

### The usual recommended starting dosages

#### If you are taking CABOMETYX alone CABOMETYX 60 mg once daily

- In children 12 years of age and older with differentiated thyroid cancer, your doctor may choose to prescribe CABOMETYX 40 mg based on the child's height and weight

It is not known if CABOMETYX is safe and effective in children younger than 12 years of age.

#### If you take CABOMETYX in combination with OPDIVO® (nivolumab)

**CABOMETYX 40 mg once daily**  
**OPDIVO 240 mg every 2 weeks**  
(30-minute intravenous infusion) or  
**480 mg once every 4 weeks**  
(30-minute intravenous infusion)

### Your doctor or nurse will determine the dose that is right for you

Each person who takes CABOMETYX may respond differently.

Please see Important Safety Information on pages 14-19 and [tap here](#) for the Patient Information in the full Prescribing Information.

## Managing select side effects

### Your healthcare team is your best resource

Your doctor, nurse, or member of your healthcare team will help you manage certain side effects. **How you feel is important to them and they want to offer additional support if you need it.**

No concern is too small to bring to their attention. They are available to help you.

If you have any concerns or are not feeling well, reach out to them right away.

### Additional resources to help you during treatment

- 1 The Treatment Journal helps you keep track of how you are feeling.
- 2 The Side Effects Tip Cards provide advice to help you manage certain side effects.

You can find these resources in your Patient Care Kit, or at **CABOMETYX.com**.

## Managing select side effects (cont'd)

Your healthcare team has options to manage certain side effects

Your doctor or nurse may:

**Lower your CABOMETYX® (cabozantinib) dose**

**Temporarily stop your CABOMETYX dose**

**Permanently stop your CABOMETYX dose**

Please note that not all side effects can be managed, and some may lead to permanent discontinuation of the medicine.

For more information on side effects of CABOMETYX, visit [CABOMETYX.com](https://www.cabometyx.com).

We have an approach called **AIM** to help you share information with your healthcare team

**A**

**ACKNOWLEDGE**  
if you are feeling different; this may be a symptom of a side effect

**I**

**INFORM**  
your healthcare team right away

**M**

**MANAGE**  
side effects by working with your healthcare team

The sooner you share information, the sooner your healthcare team can help you manage certain side effects.

Please see Important Safety Information on pages 14-19 and [tap here](#) for the Patient Information in the full Prescribing Information.

## INDICATIONS AND IMPORTANT SAFETY INFORMATION

### What is CABOMETYX?

CABOMETYX is a prescription medicine used to treat:

- People with kidney cancer (renal cell carcinoma). CABOMETYX may be used:
  - Alone to treat people with renal cell carcinoma (RCC) that has spread (advanced RCC)
  - In combination with nivolumab when your cancer has spread (advanced RCC), and you have not already had treatment for your advanced RCC
- People with liver cancer (hepatocellular carcinoma) who have been previously treated with the medicine sorafenib.
- Adults and children 12 years of age and older who have a type of thyroid cancer called differentiated thyroid cancer (DTC) that has spread (locally advanced or metastatic), **and**,
  - has progressed after treatment with a VEGFR-targeted treatment, **and**
  - your DTC can no longer be treated with radioactive iodine, or you are not able to receive radioactive iodine treatment.

It is not known if CABOMETYX is safe and effective in children younger than 12 years of age.

### What are the possible side effects of CABOMETYX?

#### CABOMETYX may cause serious side effects, including:

**Bleeding (hemorrhage).** CABOMETYX can cause severe bleeding that may lead to death. Tell your healthcare provider right away if you get any signs of bleeding during treatment with CABOMETYX, including:

- Coughing up blood or blood clots
- Vomiting blood or if your vomit looks like coffee grounds
- Red or black (looks like tar) stools
- Menstrual bleeding that is heavier than normal
- Any unusual or heavy bleeding

Please see Important Safety Information on pages 14-19 and [tap here](#) for the Patient Information in the full Prescribing Information.

**A tear in your stomach or intestinal wall (perforation) or an abnormal connection between 2 parts of your body (fistula).** Tell your healthcare provider right away if you get tenderness or pain in your stomach area (abdomen) that is severe or that does not go away.

#### Blood clots, stroke, heart attack, and chest pain.

Get emergency help right away if you get:

- Swelling or pain in your arms or legs
- Shortness of breath
- Feel lightheaded or faint
- Sweating more than usual
- Numbness or weakness of your face, arm, or leg, especially on one side of your body
- Sudden confusion, trouble speaking or understanding
- Sudden trouble seeing in one or both eyes
- Sudden trouble walking
- Dizziness, loss of balance or coordination
- A sudden severe headache

**High blood pressure (hypertension).** Hypertension is common with CABOMETYX and sometimes can be severe. Your healthcare provider will check your blood pressure before starting CABOMETYX and regularly during treatment with CABOMETYX. If needed, your healthcare provider may prescribe medicine to treat your high blood pressure. Tell your healthcare provider if you develop severe headaches, nose bleeds, tiredness or confusion, vision changes, chest pain, trouble breathing, irregular heartbeat, or blood in your urine.

**Diarrhea.** Diarrhea is common with CABOMETYX and can be severe. If needed, your healthcare provider may prescribe medicine to treat your diarrhea. Tell your healthcare provider right away if you have frequent loose, watery bowel movements.

**A skin problem called hand-foot skin reaction.** Hand-foot skin reactions are common and can be severe. Tell your healthcare provider right away if you have rashes, redness, pain, swelling, or blisters on the palms of your hands or soles of your feet.

**IMPORTANT SAFETY INFORMATION (CONT'D)**

**Liver problems.** Liver problems may happen during treatment with CABOMETYX. When CABOMETYX is taken in combination with nivolumab, severe changes in liver function tests may happen more often than if you take CABOMETYX alone. Your healthcare provider will do blood tests to check your liver function before and during treatment with CABOMETYX.

Tell your healthcare provider right away if you develop symptoms of liver problems including: yellowing of your skin or the whites of your eyes, severe nausea or vomiting, pain on the right side of your stomach area (abdomen), dark urine, bleeding or bruising more easily than normal.

**Adrenal gland problems.** Your healthcare provider will monitor you for this problem. Your healthcare provider may prescribe hormone replacement therapy or corticosteroid medicines if needed. Tell your healthcare provider right away if you develop any of the following signs or symptoms: extreme tiredness, dizziness or fainting, weakness, nausea, or vomiting.

**Protein in your urine and possible kidney problems.**

Symptoms may include swelling in your hands, arms, legs, or feet. Your healthcare provider will check you for this problem during treatment with CABOMETYX.

**Severe jaw bone problems (osteonecrosis).** Your healthcare provider should examine your mouth before you start and during treatment with CABOMETYX. Tell your dentist that you are taking CABOMETYX. It is important for you to practice good mouth care during treatment with CABOMETYX. Tell your healthcare provider right away if you develop any symptoms of jaw problems, including: jaw pain, toothache, or sores on your gums.

**Wound healing problems.** Wound healing problems have happened in people who take CABOMETYX. Tell your healthcare provider if you plan to have any surgery before or during treatment with CABOMETYX.

- You should stop taking CABOMETYX at least 3 weeks before planned surgery.
- Your healthcare provider should tell you when you may start taking CABOMETYX again after surgery.

**Reversible posterior leukoencephalopathy syndrome (RPLS).**

A condition called reversible posterior leukoencephalopathy syndrome can happen during treatment with CABOMETYX. Tell your healthcare provider right away if you have headaches, seizures, confusion, changes in vision, or problems thinking.

**Change in thyroid function.** CABOMETYX can cause changes in your thyroid function, including changes to thyroid hormone levels in your blood. Your healthcare provider will do blood tests to check your thyroid function before and during treatment with CABOMETYX.

**Decreased calcium level in your blood (hypocalcemia).**

CABOMETYX can cause you to have a decreased amount of calcium in your blood. Your healthcare provider will do blood tests to check you for this problem and give you calcium if needed. **Tell your healthcare provider right away if you get any of the following signs or symptoms:**

- Muscle stiffness or muscle spasms
- Numbness or tingling in your fingers, toes, or around your mouth
- Seizures
- Sudden weight gain
- Swelling of your arms, hands, legs, and ankles

## IMPORTANT SAFETY INFORMATION (CONT'D)

Your healthcare provider may change your dose, temporarily stop, or permanently stop treatment with CABOMETYX if you have certain side effects.

The most common side effects of CABOMETYX include:

- Tiredness
- Decreased appetite
- Nausea and vomiting
- Weight loss
- Constipation

The most common side effects of CABOMETYX when used with nivolumab include:

- Tiredness
- Mouth sores
- Rash
- Low thyroid hormone levels (hypothyroidism)
- Pain in muscles, bones, and joints
- Decreased appetite
- Nausea
- Changes in the way things taste
- Stomach-area (abdominal) pain
- Cough
- Upper respiratory tract infection

CABOMETYX may cause fertility problems in females and males, which may affect your ability to have children. Talk to your healthcare provider if you have concerns about fertility. These are not all of the possible side effects of CABOMETYX. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088 or [www.fda.gov/medwatch](http://www.fda.gov/medwatch).

If your healthcare provider prescribes CABOMETYX in combination with nivolumab, also read the Medication Guide that comes with nivolumab.

**Before you take CABOMETYX**, tell your healthcare provider about all of your medical conditions, including if you:

- Have had a liver problem other than liver cancer.
- Have a recent history of bleeding, including coughing up or vomiting blood, or black tarry stools.
- Have an open or healing wound.

- Have high blood pressure.
- Have a low calcium level in your blood (hypocalcemia).
- Plan to have any surgery, dental procedure, or have had a recent surgery. You should stop treatment with CABOMETYX at least 3 weeks before planned surgery.
- Are pregnant, or plan to become pregnant. CABOMETYX can harm your unborn baby.
  - If you are able to become pregnant, your healthcare provider will check your pregnancy status before you start treatment with CABOMETYX.
  - Females who are able to become pregnant should use effective birth control (contraception) during treatment and for 4 months after your final dose of CABOMETYX.
  - Talk to your healthcare provider about birth control methods that may be right for you.
  - If you become pregnant or think you are pregnant, tell your healthcare provider right away.
- Are breastfeeding or plan to breastfeed. It is not known if CABOMETYX passes into your breast milk. Do not breastfeed during treatment and for 4 months after your final dose of CABOMETYX.

**Tell your healthcare provider about all the medicines you take**, including prescription or over-the-counter medicines, vitamins, and herbal supplements. CABOMETYX and certain other medicines may affect each other, causing side effects.

### What should I avoid while taking CABOMETYX?

**Avoid** drinking grapefruit juice, eating grapefruit, or taking supplements that contain grapefruit or St. John's wort during treatment with CABOMETYX.

Please see Important Safety Information on pages 14-19 and [tap here](#) for the Patient Information in the full Prescribing Information.

## Learning more about select side effects

### CABOMETYX® (cabozantinib) can cause side effects

Tell your doctor or nurse right away if you have a side effect that bothers you or does not go away. Below are some select side effects that may occur while taking CABOMETYX:

If you are taking CABOMETYX + OPDIVO® (nivolumab), you may also experience side effects from OPDIVO and need to discuss what they are with your doctor or nurse.

The most common side effects of the combination were tiredness, mouth sores, rash, low thyroid hormone levels (hypothyroidism), pain in muscles, bones, and joints, decreased appetite, nausea, changes in the way things taste, stomach-area (abdominal) pain, cough, or upper respiratory tract infection.

If you have questions about **OPDIVO**, please call **1-855-OPDIVO-1 (1-855-673-4861)** or visit **OPDIVO.com**.

Write down recommendations from your doctor or nurse:

## Partnering with your healthcare team

### Prepare for your doctor's appointment

#### Before the appointment

If possible, ask your caregiver or friend to come along with you to your visit.

Be prepared with questions you want to ask your healthcare team, such as:

- What are some of the tests that will show if my treatment is working?
- How often will I need to take these tests?
- Who do I contact if I think I am having a side effect?
- Are there exercise restrictions?
- What are the steps I can take to eat healthier?

#### During the appointment

##### Take notes

- Ask your caregiver or friend to help by taking notes for you
- Ask questions if there is something you do not understand or are worried about
- If you feel unsure, ask your nurse to write down key information for you
- Do not be afraid to ask questions—your concerns matter

##### Plan ahead

- Schedule your next doctor's appointment before you leave
- Use your phone or the Wallet Card included in this handbook to keep the contact information with you

Please see Important Safety Information on pages 14-19 and [tap here](#) for the Patient Information in the full Prescribing Information.

## Taking an active role in your treatment

**Eat well.** Talk to your healthcare team about your nutrition goals

- It is important that your body gets the nutrients and calories it needs

**Keep moving.** Talk to your healthcare team about exercise and what is right for you

**Be mindful.** Meditation may help with anxiety, stress, and fatigue

**Know your blood pressure (BP).**

BP is important to staying healthy; talk to your healthcare team about your BP

I AM TAKING:

**CABOMETYX<sup>®</sup>**  
(cabozantinib) tablets

alone

in combination with OPDIVO<sup>®</sup> (nivolumab)

OPDIVO<sup>®</sup> and the related logo is a registered trademark of Bristol-Myers Squibb Company.

### Keep your healthcare team's contact information with you

- A printable version of this Wallet Card is available on CABOMETYX.com
- Use the front side to note if you take CABOMETYX<sup>®</sup> (cabozantinib) alone or in combination with OPDIVO<sup>®</sup> (nivolumab)
- Use the center section to write down your prescription and over-the-counter medications
- Use the back side to write down the names and phone numbers of your doctor and nurse

Please see Important Safety Information on pages 14-19 and [tap here](#) for the Patient Information in the full Prescribing Information.

## Financial support information and resources

To learn more about how EASE can help you, contact us at:

**1-844-900-EASE**  
(1-844-900-3273)

Exelixis Access Services® (EASE) is your resource for questions and needs related to insurance coverage, financial assistance, and treatment support for CABOMETYX® (cabozantinib).

### Helping You Start and Stay on CABOMETYX

Your EASE Case Manager is available by phone to help you:

- Understand if your health insurance covers CABOMETYX tablets and what your out-of-pocket costs for CABOMETYX may be
- Learn about your financial support options

For more information on EASE, visit [CABOMETYX.com](https://www.CABOMETYX.com).

Please see Important Safety Information on pages 14-19 and [tap here](#) for the Patient Information in the full Prescribing Information.

### If you are commercially insured...

#### **EASE Co-pay Program**

Eligible, commercially insured patients may pay as little as \$0 per month. Annual and transaction limits apply. The EASE Co-Pay Program is not available to patients receiving prescription reimbursement under any federal, state, or government-funded insurance programs or where prohibited by law. Additional Terms and Conditions apply.

### If you are uninsured, or insured but cannot afford your medicine...

#### **EASE Patient Assistance Program**

May provide you with CABOMETYX free of charge if you qualify. Additional restrictions and eligibility rules apply.

This description of the Exelixis® Access Services program is for informational purposes only. Exelixis makes no representation or guarantee concerning reimbursement or coverage for any service or item. Information provided through the Exelixis Access Services program does not constitute medical or legal advice and is not intended to be a substitute for a consultation with a licensed healthcare provider, legal counsel, or applicable third-party payer(s). Exelixis reserves the right to modify the program at any time without notice.

## Access. Assistance. Along the journey.
